Classroom Discussion Prompts & Activities

Classroom Resources for Teachers & Educators

Provided by: Land Hermit Crab Owners Society (LHCOS)

Intended audience: Educators, librarians, homeschool instructors, and informal learning programs

Version: v1.0 | 2026

Observation-Based Learning with Land Hermit Crabs

Purpose of this resource

These prompts are designed to support:

- Ethical classroom discussion
- Observation-based learning
- Critical thinking about animal welfare and conservation

They can be adapted for different age levels.

Observation prompts

Encourage students to observe without touching.

Examples:

- What behaviors do you notice at different times of day?
- How do the hermit crabs interact with their environment?
- What changes do you notice after feeding?

Responsibility & ethics discussion

Use these prompts to encourage reflection:

- What responsibilities come with caring for a living animal?
- How is a living animal different from a classroom object?
- Why might long-term care be difficult in some settings?

Conservation connections

For older students:

- Where do land hermit crabs come from?
- How might consumer demand affect wild populations?
- What choices can people make to reduce harm?

Writing or reflection activities

Optional activities:

- Short reflective writing on responsibility
- Drawing or diagramming habitat features
- Research projects on natural habitats

Optional structured lesson plans

Educators seeking more formal lesson structure may supplement these prompts with Crab Street Journal lesson plans, which include:

- Guided classroom activities
- Observation-based learning extensions
- Conservation and ethics discussion frameworks
- Adaptable materials for multiple grade levels

These lesson plans are designed to work alongside ethical care guidance and may be used whether or not live animals are present in the classroom.

 Access Hermit Crab Lesson Plans on Crab Street Journal

<https://crabstreetjournal.org/teachers-pet/>

Citizen science introduction (optional)

Discuss how observation and reporting can help scientists understand animals without harming them.

Classroom boundaries reminder

Learning should always prioritize animal welfare.

Students should understand:

- Observation does not require interaction
- Curiosity must not cause harm
- Respect includes restraint

Educational disclaimer

These activities are provided for educational purposes and should be adapted appropriately for age, environment, and supervision.
